This is, like modern Warfare or Black Ops, we face a full course multiplayer FPS. Call of Duty: The mobile control system is fully adapted to touch devices. With your left thumb, you can control the movement of your character, while with your right thumb you can target. If we touch the right side of the screen twice, we'll use the range of the weapon. And shooting, as in many other Android titles, is automatic. In any case, from the options menu, you can customize the controls as much as you want. In Call of Duty: Mobile you will find two main game modes: zombies and multiplayer. Both are two old acquaintances of the franchise who will allow us to face other players over the internet, as well as collaborate side by side to defeat the undead. In addition, in multiplayer mode, you'll have four different modes and many other cards available, including old ones like Nuketown, Kidnapping or Killhouse. Call of Duty: Mobile is an exclusive title offering a solid multiplayer FPS experience for Android. The game also has outstanding graphics, a good assortment of cards and weapons, and all the franchise's charisma as important as Call of Duty. Call of Duty: Legends of War for Android is now available After constant leaks from various closed beta phases carried out in Asians, we can finally try the long-awaited call of myths: Legends of War, the new installment of the mobile saga that was developed by Tencent (specifically its TIMI studio, creators of one of the two existing PUBG Mobile) under the auspices of Activision itself.
